Writing rules for reports

- Decide for a solid plan and contents before writing parts
- Use inputs to add documents, so everyone is working on his document, so not the same
- For pictures, create a folder img in each folder that contains all pictures of your subdocument
- Write folders names without spaces (using _ if necessary)
- Don't push on git code which is not compiling
- Don't use contractions in the report (isn't => is not)
- Use colon that way: no space
- Don't use we, you in the report (exception: in the case we've done something, like studied something for the project). Use passive forms
- Do a relecture of your part
- Agree on the vocabulary :
  - Monte Carlo Search Tree algorithm
  - MCTS algorithm
  - Monte Carlo
  - two-players
  - Minimax
  - Grid'5000
  - Artificial Intelligence
  - Date with numbers and th on the top
  - Agile method
